DETAILED ACTION

1. Applicant's response and amendment received January 11, 2008 is acknowledged.

Claims 1-13 have been canceled.

Claims 14-26 are pending in the instant application.

Applicant's election with traverse of the invention of Group I, claims 14-24, drawn to methods of treating thrombocytopenia in the reply filed on January 11, 2008 is acknowledged. The traversal is on the ground(s) that the inventions have unity of invention because there would have been no motivation to combine the prior art substances into a single composition because nerve growth and nerve differentiation are two entirely different processes.

This is not found persuasive because as disclosed by Bibel et al., one of the ways in which neurons differentiate to perform new tasks is by the growth of neurites and as such neuron growth and differentiation are linked phenomena (Genes and Development, 2000, 14:2919-2937, see entire document).

The requirement is still deemed proper and is therefore made FINAL.

Claims 25 and 26 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on January 11, 2008.

Upon review of the claimed subject matter, the following issues have been noted.

Application/Control Number: 10/542,238

Art Unit: 1644

Election/Restrictions

Page 3

2. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are the PACAP signaling inhibitors used in the instant claimed inventions. Applicant is to elect a single specific inhibitor for initial examination. Examples of such inhibitors are recited in claims 21-23. Note that a responsive election should make clear the structure of the inhibitor as well as its target. For example, if applicant elects a structure of antibodies as an inhibitor, the antigen specificity of the antibody must be indicated, such as anti-PACAP antibody.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claims are generic: claims 14 and 24.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The technical feature is the ability to inhibit PACAP signaling. Such agents are well known in the art, being disclosed, for example, in the art of DiCicco-Bloom et al. (US2002/0182729, of record) and Suzuki et al. (US Patent 5,486,472). As such the technical feature of PACAP signaling inhibition was known in the prior art. Thus the instant technical

Application/Control Number: 10/542,238

Art Unit: 1644

feature does not distinguish the instant invention over the teachings of the prior art and therefore the inventions have been determined to lack unity of invention.

Page 4

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of the species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the election of species requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected species.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the species unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other species.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Szperka whose telephone number is (571)272-2934. The examiner can normally be reached on M-F 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eileen O'Hara can be reached on 571-272-0878. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
